

**NHDF-JF-CRYO Cryopreserved human fibroblasts**

**Cell Specification**

Lot 043-120918a/b

Batch release: December 10, 2012

<p>Skin: juvenile foreskin Gender: male</p>	<p>Serology: n.a.</p>
<p>Cryopreservation: Passage 1 on: September 18, 2012 Number of cells per vial:     0.75 x 10<sup>6</sup> cells (043-120918a)     1.0 x 10<sup>6</sup> cells (043-120918b)</p>	<p>Thawing: October 19, 2012 Viability after thawing: 95 % (a)/ 96 % (b) Yield after thawing:     0.8 x 10<sup>6</sup> cells (043-120918a)     0.96 x 10<sup>6</sup> cells (043-120918b) Culture in FGM Fibroblast Growth Medium Number of Population Doublings: &gt; 20  Mycoplasma: negative</p>
<p>Phase contrast in passage 2 after thawing</p> 	<p>Fluorescence imaging in passage 2 after thawing: Fibroblast specific surface antigen CD90 (green); nuclei (Hoechst 33342, blue)</p> 

Note: Yield, viability and population doublings are based on experiments performed at PRIMACYT using PRIMACYT's manual for thawing and culture of human fibroblasts.
